

GlareShield®

Cleaning Instruction & Handling Guideline

Every package must be opened carefully to avoid scratches and other damage to the glass sheet or coating.

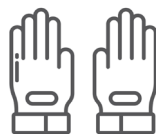

The glass must be stored vertically, with a 3-7° tilt, under the following conditions:

- **In a dry, well-ventilated warehouse to prevent condensation on the surface**
- **Protected from water (e.g. no roof leaks)**
- **Never stored outside or in the open**

GlareShield is a relatively hard coating. However, due to the anti-reflective coating, fingerprints and dirt are more visible than on uncoated glass. They can be easily removed using an ammonia-free glass detergent (e.g. Mr Proper) or alcohol, and a soft, dry paper tissue.

If you encounter problems with stains, the following rules must be observed:

- **Never touch the coating with anything hard or with rough surfaces**
- **If you need to handle the glass with vacuum cups, ensure the cups are perfectly clean, silicone-free, and protected with suitable caps**
- **Note that the caps reduce the maximum lifting capacity of the cups**

SOFT, CLEAN, DRY GLOVES MUST BE WORN FOR ALL HANDLING
